Celebration Baptist Church isn't just a location. It's a group of people that are committed to living life in a way that honors God. They believe that people have been created to worship Him. Each week they share in an authentic, contemporary celebration focused on biblical principles that change hearts.

Mantel Teter Architects began its relationship with Celebration Baptist Church at a seminar David Evans led at the National Association of Church Business Administrators Conference. The church leadership team recognizes MTA as an industry leader in church facility design that can help them meet the unique challenges they face with their existing facilities and their dreams of expanded facilities needed to support their growing vision and ministry. These unique challenges include creating a connecting space between their existing "campus style" building arrangement, creating fellowship space where community and connection can take place and re-purposing their existing buildings to better meet ministry needs for children and youth, which are experiencing dynamic growth.

We worked with the senior staff and key ministry leaders in the church through a series of programming workshops to determine the vision of the church and to formulate strategies for updating the church's campus Master Plan. New space includes an open and inviting community and connection space that provides a new, readily identifiable, main building entrance and provides a physical connection between their existing Multipurpose/Education/Office Building and their Existing Worship Building. Renovated spaces include re-purposing the existing Multipurpose/Education/Office Building as Christian Education space for children and youth as well as expansion of the existing Worship Space and enhancement of audio, video and theatrical lighting systems and acoustics.
