FIRST MISSOURI NATIONAL BANK

The Brookfield, Missouri based bank occupies a 3,200 S.F. tenant finished space for their first branch facility. The bank has minimal offices and banking services initially with the anticipation that growth may occur and expand into adjacent unfinished tenant spaces. The plan allows for (3) teller stations inside and (2) drive-through remote teller stations and ATM/night deposit boxes outside with overhead canopy. Current technology allows for the use of cameras and monitors between the remote teller stations and the teller area inside without the use of a glass window at the drive-thru area. The project presented an excellent opportunity to demonstrate the coordinating abilities between the architect and the bank equipment installer/supplier (Oppliger).

Finishes include large porcelain floor tiles that appear as a slate or rough stone throughout the reception area and down the center corridor; stained and varnished hardwood wainscot wrapping the perimeter of the reception and conference rooms; light covers located under the countertop at each teller station that further enhance the importance of the reception space coupled with a coved ceiling and suspended acoustical ceiling tiles. It is through the use of these finishes along with the design of the spaces that the bank's corporate values are expressed. These qualities include stability, strength, formality, respect, and quality without the extravagance or expense.
